Assignment submission requirements

All submissions for assignments must meet the following requirements. Submissions that do not completely comply with these requirements are subject to a deduction of 10%.

1. Every assignment requires a write-up and one or more MATLAB script files. The write-up must be in a single PDF file and include responses to **all** questions, including computational questions done in MATLAB. The responses for such questions should provide a verbal summary of the computational results.

2. Your name and student ID appear at the top of the first page in the write-up.

3. The questions are answered in the order given in the assignment.

4. Pages appear in the **correct orientation**.

5. **Acknowledge all forms of outside help** you have received on the **last page** of your submission. (Note that consulting course material in Brightspace does not constitute outside help and need not be acknowledged.) **You must specify the question(s) for which you have received outside help.** Outside help includes teaching assistants, other individuals in person or online, computer software, AI (e.g. ChatGPT), resources not listed on the course outline, etc. If your help comes from a website, you must attach a copy of the content you used or provide a working URL for the website. If you use AI such as ChatGPT, provide a screenshot of the session including the prompts used. If you have consulted any individual, the **full name and contact information** of that individual must be provided. **If you have received no outside help whatsoever, write down "no help received" as your acknowledgement.**

   Examples of acknowledgement:

   - "I received help from John Doe with obtaining the solution in question 2b."
   - "I consulted Khan Academy on calculating the rank for question 5."
   - "I received a hint from my tutor Jane Doe for question 1."
